19th November 2007

Dear Sir/Madam,

I write in response to your Radio advert regarding air quality, living as we do in Bellozanne Valley you can imagine the air problems we are subjected to on a regular basis.

The sewage treatment works is the main offender little or no effort appears to be made to control the smell, I recall hearing some time ago that there were plans to cover the plant as can be seen, or not as the case maybe in many European countries.

Number two on my list of air pollution is the scrap yard; it's hard to imagine that scrap metal can smell believe me it can. The smell first thing on a warm summer's morning is dreadful the fuel diesel, petrol and grease hangs in the air.

Last on the list is the infamous Bellozanne chimney belching out lord knows what thankfully we rarely have a problem with this as the smoke goes over us however what damage it has done to the residents who live close to it is unknown.

I hope my grumble is of some use.

Yours sincerely

Mr J Gillard
