

## **Cardin Pasturel – 10<sup>th</sup> March 2022**

Carbon neutrality is an idea concocted by ideologs who are isolated from the effects of this policy. This policy is going to throw us all into fuel poverty meaning that only the very rich will be able to travel.

The USA, Europe and UK have closed their own sources of fuel (sacrificing energy independence) and imported from foreign powers, purchasing at spot price and influenced by strained relations.

E10 petrol- adding 10 ethanol may reduce co2 emissions by 0.5 - 2%. Ethanol for E10 fuel is made from corn. Corn requires nitrogen fertiliser, however, the price of fertilisers is going through the roof due to world wide closures of urea manufacturing. By the end of this year it is likely that the price of corn ethanol is too high to add it to petrol.

The great thing about blaming co2 for climate change is that it is impossible to measure the effectiveness of our efforts. It is a transfer of wealth from the people to the IPCC for carbon credits, who then distribute funds to their lobbyists and NGOS.
