Ref TASER GUNS IN JERSEY.

10th April 2012

Dear Sirs,

With reference to the use of Tazer guns especially on the island, this is tottaly un-necessary, for various reasons. This gun is extremely dangereous, and represents a formidable weapon of death far more dange-reous than am ordinary rifle or gun.

Many cases of in-appropriate use of this gun have been reported especia-ly in the USA where a large number of death has been reported. This gun exposes the human body to 50 000 volts inpatts by the user and this electric shock is enough to kill a horse.

Any person suffering from a heart condition is especially at risk here and there are many other implications to organs being affected, eyes represent a huge problem, and bearing in mind this is an electric charge or discharge, this intersers with the heart own electric pulse, this is a huge interference with the body 'sown electric pulse of heart beat.

Many other organs, also can be irrervesally damaged when confronted with a 50 000 volts discahrge. Muscles, nerves etc...

This import of the Tazer gun is not only an un-nessacry weapon, which will create yet another waste of public funds, but in the hand of ill prepared and unaware police force will result in law court for damages sooner or later.

I trust this letter will be taken into account unlike, the past scrutiny board who took no notice of telephone mast danger, this also represents a most deadly risk of radiation exposure to the whole population of the isl and. I hope that we do not see the Tazer gun on the island, in the hands of local police, after all, same has coped well with armory in stock so far. This purchase of this technology is both extremely dangereous and un-necessary.

Your action on this proposal will be monitered I am sure by many who are like minded.

Yours,

  
P. Lebegue
